

Fractal Audio Floor Controller Compatibility

8-6-10. Many people have asked for information on the compatibility of Mission Expression Pedals with the forthcoming MFC-101 MIDI floor controller from Fractal Audio Systems. The following update describes the current known compatibility status.

As of early August 2010, Mission Engineering does not have access to an MFC-101 for testing. However, specifications have been shared between Mission and Fractal engineers and testing has been done at Fractal. We believe that the following Mission Expression Pedals designed for use with the Fractal Audio Axe-Fx will function unchanged with the MFC-101.

Mission SP-1
Mission SP1-R
Mission EP-1
Mission EP1-R

Mission Expression pedals designed for other floor controllers may require modification or upgrade. Specifically:

Mission SP1-LF
Mission SP1-LG

These controllers use momentary switches that are wired in a specific way in order to function with those controllers. For compatibility with the MFC-101, these pedals can be upgraded with a latching switch kit, 'Mission Kit-L'. This is a pre-wired self-install kit that can be fitted by the user to replace the momentary switch with a latching switch compatible with the MFC-101 and Axe-Fx. The latching switch kit will be available for order at www.mission-engineering.com, priced at \$12.00. Alternatively, users can return pedals to Mission for upgrade for a small charge.

As soon as we are able to obtain an MFC-101 unit, we will do additional testing and post setup videos. The Mission SP-2 and SP2-R have not yet been tested with the MFC-101.
